Executing Code with Commands

Thomas Claudius Huber
Software Developer

@thomasclaudiush www.thomasclaudiushuber.com

Module Outline

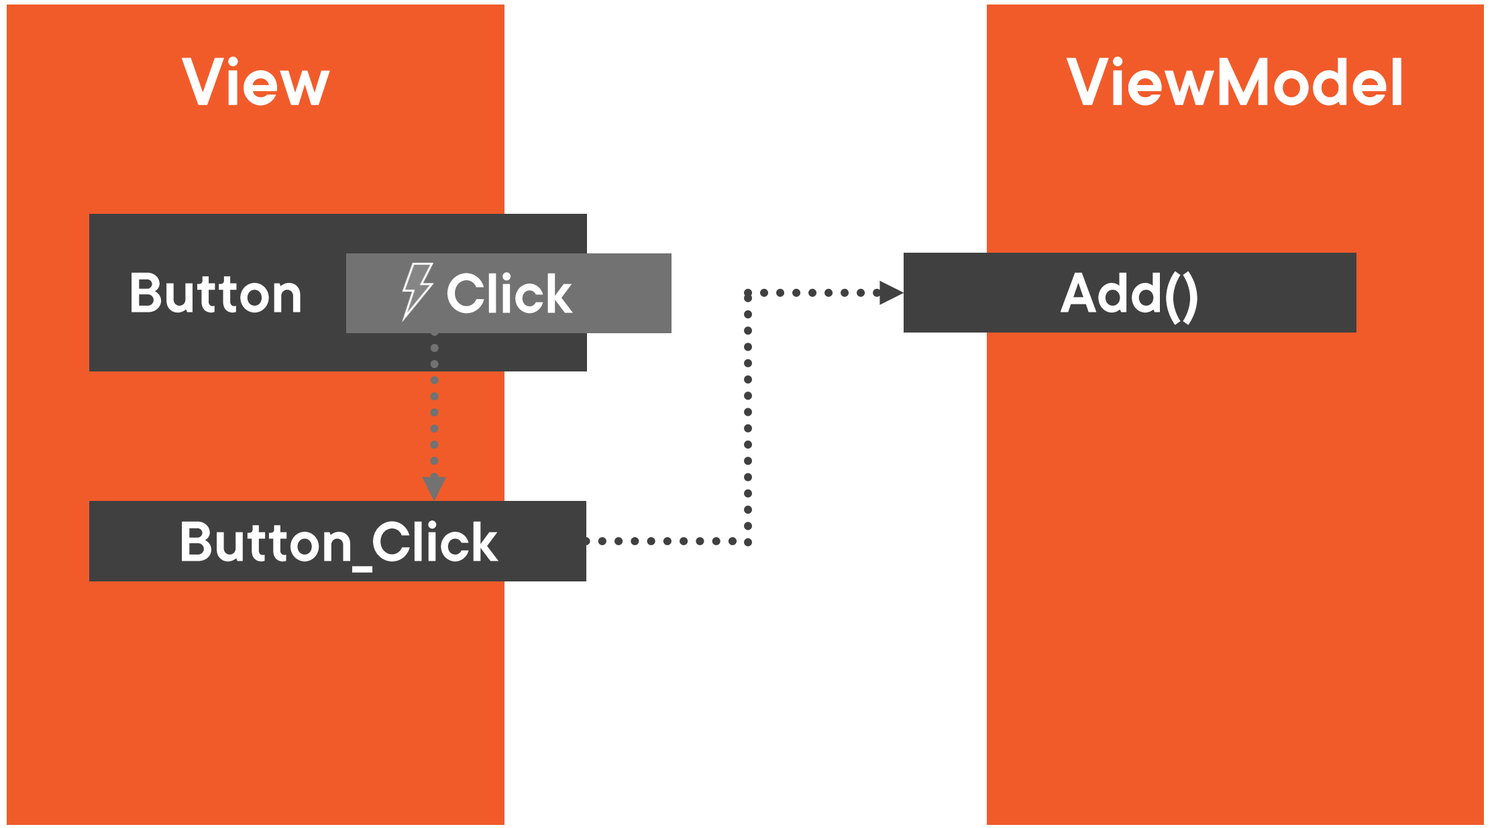
Execute logic in the ViewModel

Bind events to methods with x:Bind

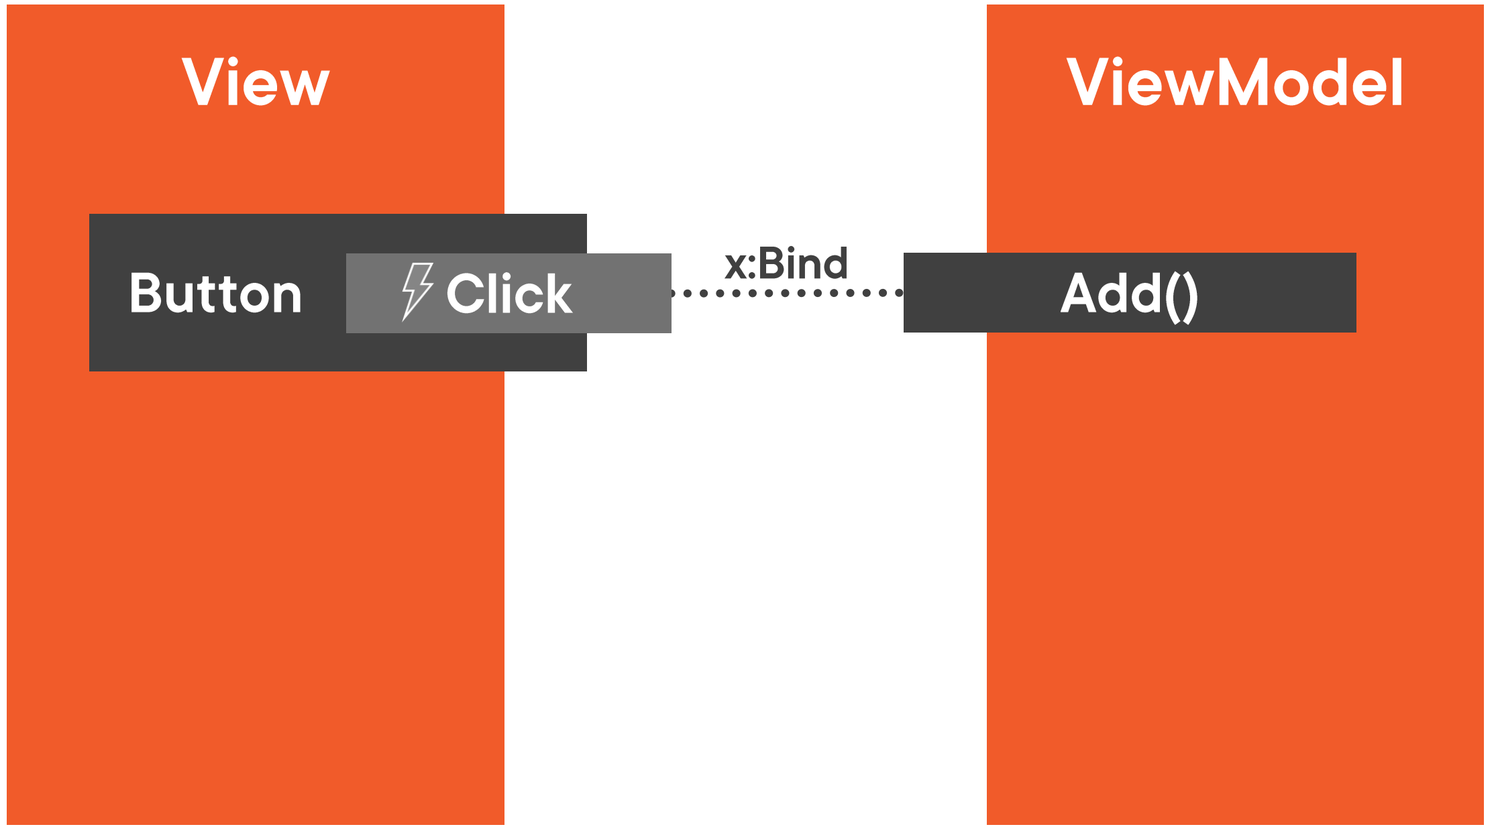
Use commands

- Understand commands and MVVM
- Create and use a DelegateCommand
- Bind the view to command properties

Bind events to methods with x:Bind



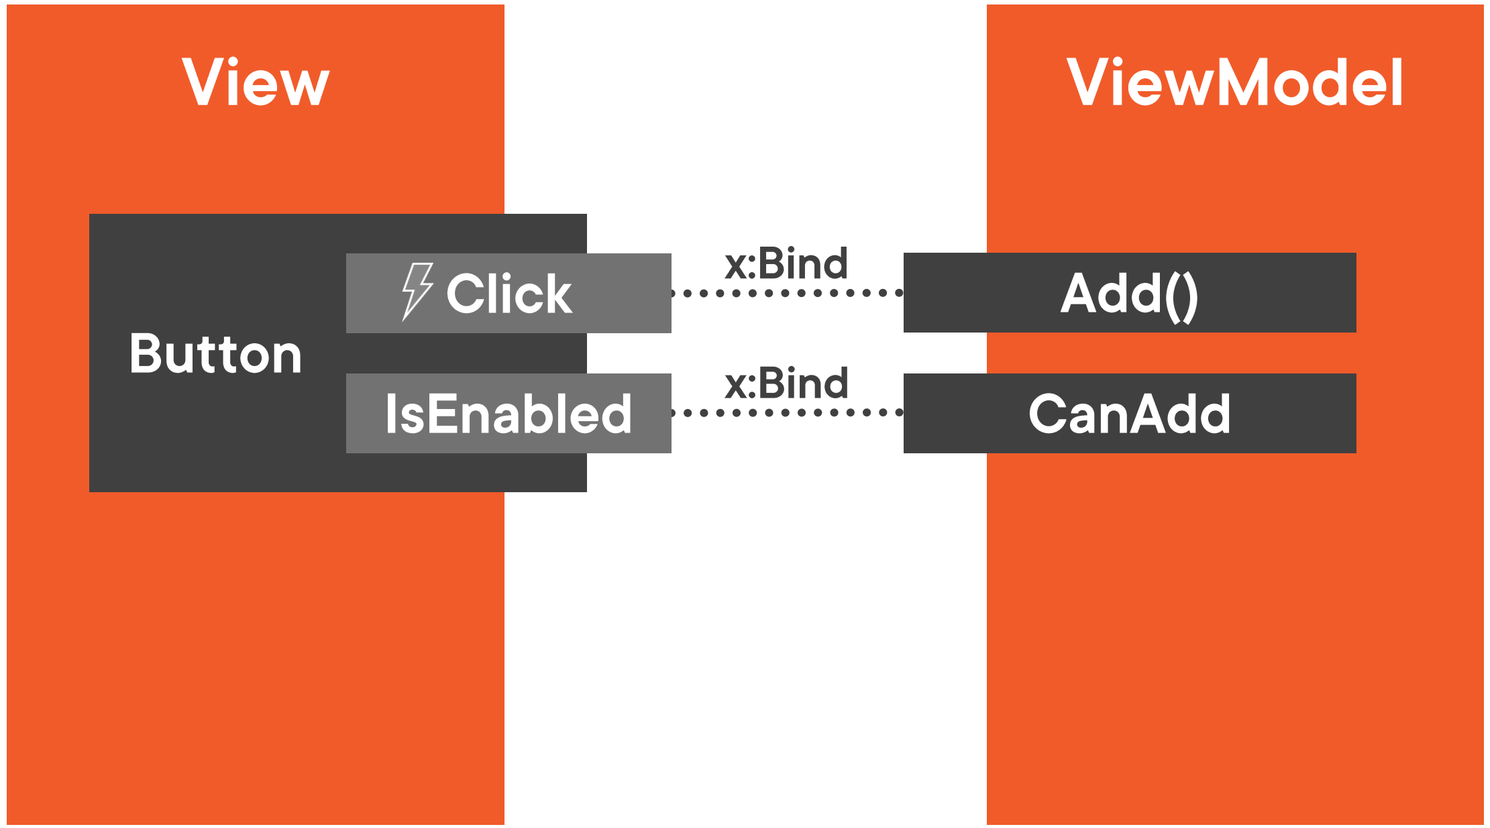
Bind events to methods with x:Bind



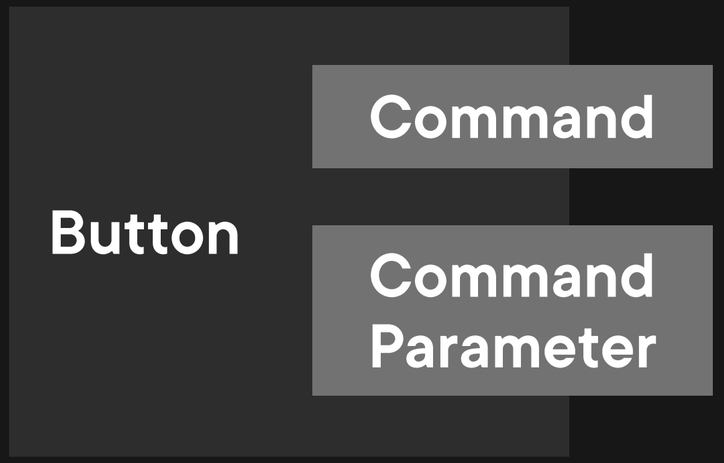
Demo

Bind the Click event to an Add method

Understand Commands and MVVM

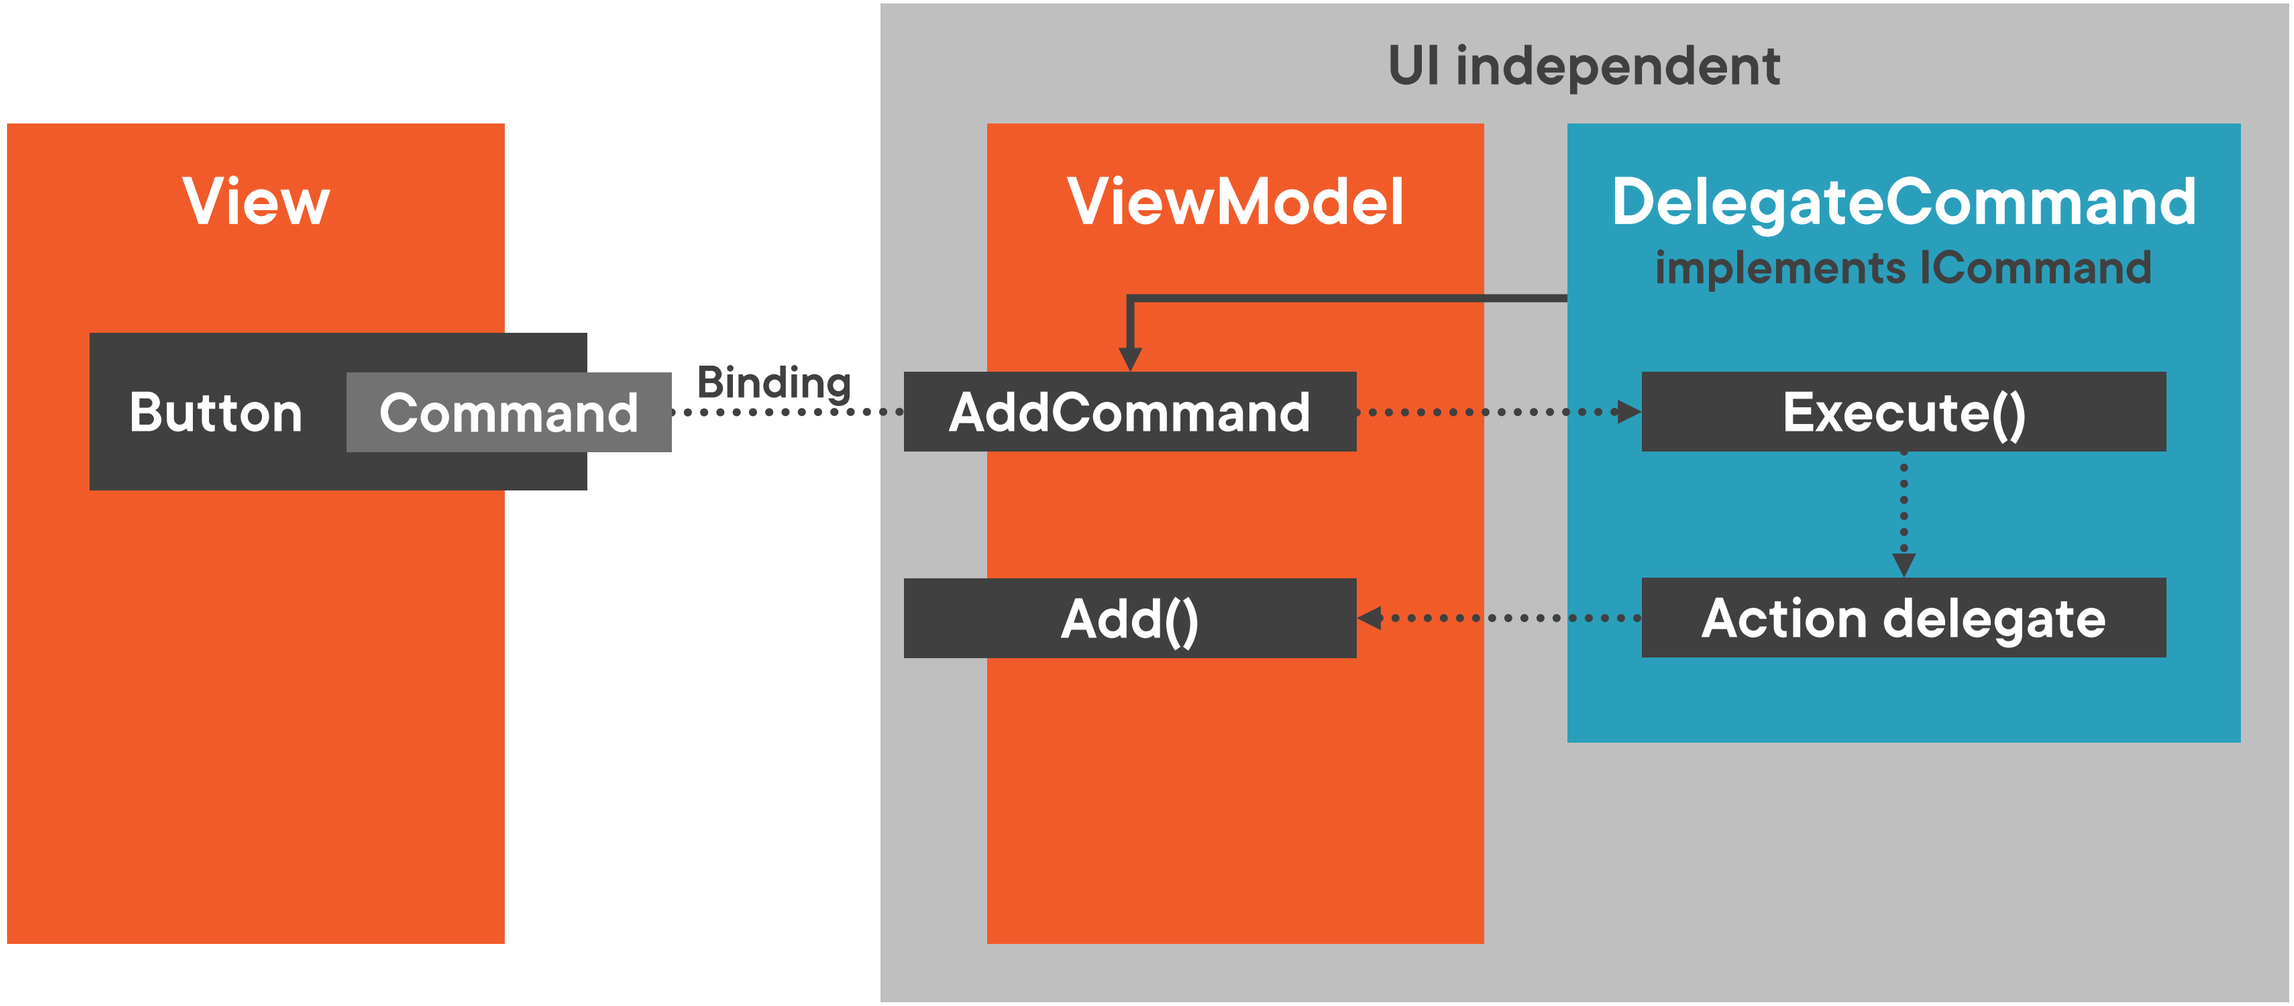


Understand Commands and MVVM



```
public interface ICommand
{
  event EventHandler? CanExecuteChanged;
  bool CanExecute(object? parameter);
  void Execute(object? parameter);
}
```

Understand Commands and MVVM



Demo

Create a DelegateCommand class

Demo

Use the DelegateCommand in the ViewModel

Demo

Raise the command's CanExecuteChanged event

Summary

Execute logic in the ViewModel

Bind events to methods with x:Bind

Use commands

- Understand the ICommand interface
- Create a DelegateCommand class
- Define command properties
- Bind the view to command properties
- Raise CanExecuteChanged event
